

POLICY ON THE PROTECTION TO THE BIODIVERSITY

In the frame of the social commitment of SBH HOTELS & RESORTS with the Biodiversity and with the target to minimize the impact of our hotels on the biodiversity, we try to achieve a positive global contribution, requesting in the same way the collaborating companies the adoption of the same principles of performance:

- Complying of the current regulation.
- Environmentally responsible business practice and preventive approach that favors the environment.
- Development and diffusion of the respectful technologies with the environment.
- Design in harmony with nature and adoption of integration solutions to the environment, to reduce the visual impact. Development of collaborations with institutions and agencies responsible for conservation.
- Promoting within the design of gardens and the hotel grounds the use of indigenous or culturally appropriate naturalized plants, perfectly adapted to climatic conditions, which reduces the maintenance and use of water and chemical fertilizers, pesticides and herbicides which represent a threat to the biodiversity, and at the same time the use of non-threatened species, also avoiding the introduction of potentially invasive exotic species.
- Promoting the use of natural materials proceeding from sustainable sources, which reduce the modification of the scenery.
